

Swiss Water Monitoring Networks

Other Water Bodies

Groundwater, lakes, wastewater, atmospheric/isotope, portals & drinking water networks

21 networks in this file	6 Sept 2026 document date	Research: 31 Aug 2026 data research date
-----------------------------	------------------------------	---

This document is part of the Swiss Water Monitoring Networks research series (41 networks mapped, research date: 31 August 2026). It covers 21 non-river monitoring networks. Every network entry was sourced from fetched agency web pages; source URLs are embedded in the table cells of the full research document. Generated by Perplexity Computer.

Other Water Bodies — 21 Networks

#	Agency	Network	Water Body Type	Parameters	Stations	Frequency	Format	Open Data	API / Access
3	BAFU/FOEN	Pilotprojekt Seewassertemperatur	Lakes, small lakes, ponds	Water temperature incl. depth profile	3 pilot + 8 further small lakes	Continuous at several depths	n.a.	n.a.	n.a.
8	BAFU/FOEN	NAQUA — Modul QUANT	Groundwater + springs	Groundwater levels; spring discharge; water temperature; conductivity; partly turbidity	91 monitoring sites	Continuous recording (temp, conductivity, turbidity); some periodic	GeoJSON; WMS layer ch.bafu.hydroweb-messstationen_grundwasser	Partial — station geodata via geo.admin.ch ; measurement licence not stated	GeoJSON + OGC WMS + map.geo.admin.ch ; hydrodaten.admin.ch station pages
9	BAFU/FOEN	NAQUA — Modul TREND	Groundwater, springs	Organic/inorganic compounds; Ca, Mg, bicarbonate; water levels; spring discharge	50 detailed monitoring sites	n.a. (since 1997, fully operational 2005)	n.a.	No — no data licence/download stated	Results published as PDF report
10	BAFU/FOEN + cantons	NAQUA — Modul SPEZ	Groundwater	Nitrate; pesticide residues; pharmaceutical residues; halogenated hydrocarbons	~500 sites across Switzerland	n.a. (with cantons since 2002)	n.a.	No — none stated	n.a.
11	BAFU/FOEN + MeteoSwiss	NAQUA — Modul ISOT	Precipitation + rivers (isotope sampling)	Stable water isotopes oxygen-18 and deuterium; air temperature; vapour pressure	22 sites: 13 precipitation + 9 river	n.a.	n.a.	No — none stated	n.a.
13	MeteoSwiss	SwissMetNet automatic measurement network	Atmosphere (not water bodies)	Air temperature; precipitation; wind; sunshine; humidity; radiation; pressure	~160 SwissMetNet + ~100 precipitation + 3 tower stations	Every 10 minutes	Open-data files; JSON via api.existenz.ch	Yes — OGD by MeteoSwiss; licence name not stated	opendatadocs.meteoswiss.ch ; api.existenz.ch
14	swisstopo	swissTLM3D Gewässernetz / hydrographic network	Rivers + lake outlines (CH + Liechtenstein) — spatial reference only	None — spatial reference data, no measured parameters	n.a. (no stations)	Dataset updated annually	API (JSON)/XML metadata; ESRI REST; WMS/WMTS	Partial — on opendata.swiss ; licence not stated	opendata.swiss / swisstopo ; geo.admin.ch
18	AWEL Kanton Zürich (Gewässerschutz)	Grundwasserstände (kantonale Grundwasserbeobachtung)	Groundwater	Groundwater level; mean water level maps with isohypses	n.a.	Continuous	n.a.	n.a.	Web map with newest values; geological borehole profiles
19	AWEL Kanton Zürich (Grundwasser)	Grundwasserqualität (kantonale Umweltbeobachtung + NAQUA)	Groundwater, spring water, drinking-water abstractions	Nitrate; hardness; conductivity; temp; O ₂ ; pH; ions; PFAS; chlorothalonil metabolites; organic traces	Selected sites (number not stated)	n.a. (chlorothalonil monitored since 2019)	Web maps (Züri Trinkwasser Map)	Partial — results on public maps; no API/licence stated	Four regional map viewers (NW/NE/SW/SE)
26	Kanton Aargau (groundwater)	Grundwasserdaten / gemeinsames Messnetz AG-LU	Groundwater (+ precipitation, surface water)	Groundwater level; discharge; water level; precipitation; biological/chemical quality	Over 50 abstraction sites as online stations	Daily resolution, updated daily	Excel download (last 10 years); hydrological yearbook (electronic)	Partial — free Excel + interactive maps; no licence stated	Interactive maps + Excel download

#	Agency	Network	Water Body Type	Parameters	Stations	Frequency	Format	Open Data	API / Access
29	Eawag + ETH Zurich	Urban Water Observatory (UWO), Fehraltorf	Wastewater/sewers; rivers (Luppmen/Kempt); groundwater	Rainfall; flow; water level; conductivity; temperature; proxy pollution-load sensors; pesticides	124 sensors in dataset (89 on LoRa, 3 LoRaWAN gateways); 111 currently in network	1–5 minute resolution	Eawag Datapool with Julia/Python/Matlab packages; R-Shiny dashboard	Yes — unique open-access dataset (ESSD publication)	Datapool database + DAP libraries + web dashboard; partial remote facility access
30	Eawag + partners	Datalakes — Lake Monitoring on Swiss Lakes	Lakes / surface waters	In-situ physical, biological, chemical; lake water temperature (core target)	n.a.	High-frequency observations	Portal dataset downloads; formats not stated	Yes — open-access sensor-to-front-end platform; FAIR principles; licence n.a.	Interactive map viewer + data portal + API (datalakes-eawag.ch)
31	Eawag + EPFL + UNIL + UNIGE	LéXPLORE floating platform, Lake Geneva	Lake (Lake Geneva, near Pully, 110 m depth)	Lake physico-biological processes; water–atmosphere interactions; skin temperature	1 platform (10-year deployment)	Unparalleled frequency; live skin-temperature feed	Via Datalakes datasets	Partial — core datasets via Datalakes; licence n.a.	Datalakes portal/API
32	Eawag	Aquascope, Greifensee	Lake (Greifensee)	Images of planktonic microbes	1 instrument site	High-frequency imaging (since spring 2018)	Images	Partial — live images viewable on Aquascope platform	Aquascope web platform
33	Eawag + BAG	Nationales Abwassermonitoring (respiratory viruses)	Wastewater (WWTP influent / raw sewage)	SARS-CoV-2; influenza A/B; RSV; viral load; variants by sequencing; WWTP flow	10 WWTPs (1.97 M people); 6 in variant monitoring	Daily raw-sewage sampling; series updated 1–2 × per week	Dashboard + open datasets on opendata.swiss	Yes — datasets published on opendata.swiss	BAG infectious-disease dashboard; covSPECTRUM since 2026
34	Eawag	DroMedArio (wastewater-based epidemiology)	Wastewater	Drugs, medicinal products, alcohol and tobacco residues	n.a.	n.a. (monitoring over time)	n.a.	Partial — results via Eawag data portals	Eawag data-portal page
35	Eawag	Sensor Lab (Labor für Sensornetzwerke, Automation und Elektronik)	Swiss surface waters (research infrastructure, not fixed network)	Supports arbitrary parameters; chemical sensing; underwater robotics	n.a. — sites: Kastanienbaum and Dübendorf	n.a.	n.a.	No — internal research service	Networking and remote access from signal to data backup
37	WSL	EnviDat environmental data portal	All environmental domains incl. hydrology/groundwater datasets	Dataset-dependent (718 datasets in catalogue)	718 datasets	Dataset-dependent; near-real-time API for GC-Net operational stations	CKAN-based; DOI-referenced archives; API endpoints	Yes — WSL open environmental data repository; per-dataset licences	CKAN API (envidat.ch/data-api/...); DOI downloads; GitHub mirrors
39	opendata.swiss (federal OGD portal)	Water datasets catalogue (BAFU, swisstopo, cantons, EnviDat)	All water body types (metadata catalogue)	Catalogue of datasets: water temperature, discharge, HUG stations, wastewater, cantonal hydrometry	n.a. (catalogue)	Per dataset; temperature station dataset continuous	DCAT metadata API (JSON)/XML; resource formats per dataset	Yes — Swiss OGD portal; individual dataset pages lack licence names	DCAT metadata API (JSON)/XML; filters by organisation and format

#	Agency	Network	Water Body Type	Parameters	Stations	Frequency	Format	Open Data	API / Access
40	Wasserversorgung Zürich (WVZ)	WVZ Qualitätsüberwachung (drinking water)	Lake water (Zürichsee); groundwater (Hardhof); treated drinking water; distribution network	Turbidity; pH; conductivity (real-time); >300 measurement parameters (biological, metals, pesticides, pharmaceuticals)	9 sampling-point codes at Moos, Lengg and Hardhof	Continuous/real-time online; >10,000 lab samples/year; open dataset updated annually	CSV per year (2023_Trinkwasserqualitaet.csv, 2024_...); PDF summary	Yes — raw data in Stadt Zürich open-data catalogue	data.stadt-zuerich.ch ; annual CSV download
41	SVGW/SSIGE	trinkwasser.ch quality-data platform	Drinking water from public suppliers	Supplier-published quality data; parameters not specified	n.a. (one entry per participating supplier)	Not real-time	Web pages per supplier; no formats stated	No API/licence; free publication platform for suppliers	Search by postcode/map; supplier login for publication

Agency Notes

BAFU / FOEN (Bundesamt für Umwelt)

FOEN is the backbone of Swiss water monitoring, operating and coordinating several networks combining long-term fixed stations with temporary sites. The quantity side (Basismessnetz, ~260 stations, 200 discharge sites) is 90% automated with remote retrieval and calibrated by 5–6 discharge measurements per station per year plus weekly on-site checks. Station geodata are published as 'Opendata OPEN: Freie Nutzung' via geocat.ch; real-time values via LINDAS at 10-minute cadence. The SMS alerting service ended 1 July 2026 — users directed to 'Meine Pegel' push notifications. NADUF was renamed NAWA FRACHT in 2025. Contact: hydrologie@bafu.admin.ch / abfragezentrale@bafu.admin.ch

NAQUA — National Groundwater Monitoring

More than 600 groundwater monitoring sites in four modules. QUANT (91 sites, half federal / half cantonal or utility-run): continuous temperature/conductivity/partly turbidity, mostly telemetered; geodata record states 'around 100 sites' vs programme page 91 — both cited. TREND (50 sites, laboratory programme since 1997/2005). SPEZ (~500 sites with cantons since 2002, laboratory analyses). ISOT (22 sites, isotope sampling co-located with MeteoSwiss and NADUF sites). Source: bafu.admin.ch/de/naqua

MeteoSwiss (Bundesamt für Meteorologie und Klimatologie)

MeteoSwiss states plainly that monitoring lakes and rivers is not its remit — discharge, river temperature and lake levels are FOEN's responsibility. SwissMetNet comprises ~160 automatic stations + ~100 automatic precipitation stations + 3 tower stations at 10-minute cadence, fully documented OGD. Its water relevance is as precipitation/meteorological input and as host sites for NAQUA ISOT precipitation sampling. Source: opendatadocs.meteoswiss.ch

swisstopo (Bundesamt für Landestopografie)

No water sensors. swisstopo supplies the hydrographic geometry (swissTLM3D Gewässernetz: watercourses and lake outlines for Switzerland and Liechtenstein, annual updates) and the geo.admin.ch service infrastructure (STAC, ESRI REST, WMS/WMTS) through which FOEN station layers are served. Contact: geodata@swisstopo.ch

AWEL Kanton Zürich (Amt für Abfall, Wasser, Energie und Luft)

Four distinct activities: (1) Hydrometry: >60 level stations, near-real-time, discharge derived from rating curves — declared OGD but delivered via order form (free for normal requests, CHF 140.20/h for very large); no API, attribution 'AWEL, Kanton Zürich' required. (2) Surface-water quality: 15 continuously auto-sampled main stations + 150 periodic sites + 11 lakes + ~100 groundwater/spring abstractions on 4-year rotation. (3) Groundwater levels: continuous data loggers. (4) Groundwater quality: nitrate, conductivity, temperature, O₂, pH, ions, PFAS, chlorothalonil metabolites since 2019. ISO 17025 accredited. Contact: marco.walser@bd.zh.ch

Kanton Aargau — Hydrometrie and Grundwasser

Most transparent sensor documentation of any Swiss canton: redundant pressure + radar level probes, water-temperature sensing, PLC cabinets with dual mobile/leased-line transmission, 10-minute data free for public use. Groundwater: >50 online abstraction stations at daily resolution, joint precipitation network with Luzern. Some AG stations are FOEN Basismessnetz sites. Source: ag.ch

Eawag (Swiss Federal Institute of Aquatic Science and Technology)

The sensor-innovation hub. Urban Water Observatory (UWO) Fehraltorf: 124 sensors (89 on LoRa, 3 LoRaWAN gateways, LORIOT middleware, ~4 km range), 1–5 min resolution, spanning sewers/rivers/groundwater, Eawag Datapool warehouse with Julia/Python/Matlab/R-Shiny access. Datalakes: open sensor-to-front-end platform for Swiss lakes (map viewer, data portal, API, FAIR principles) — API returning connectivity errors on 31.08.2026. National wastewater monitoring: 10 WWTPs covering 1.97 M people (SARS-CoV-2, influenza A/B, RSV; variant monitoring at 6 WWTPs, covSPECTRUM since 2026). Sensor Lab at Dübendorf since 2015. Contact: frank.blumensaat@eawag.ch (UWO)

WSL (Swiss Federal Institute for Forest, Snow and Landscape Research)

Water sensing concentrated in the Alptal torrent research site (Erlenbach, Vogelbach, Lümpenbach): 10-minute means since 1984, daily means 1968–2017 downloadable from EnviDat, weekly NADUF water quality since 2003, snow at >15 manual locations, plus bedload, isotope (ETH Zurich) and catchment groundwater (University of Zurich) data available on request. WSL also operates EnviDat (718 datasets, DOI-referenced, CKAN API, harvested into opendata.swiss). WSL is a NAWA FRACHT partner alongside BAFU and Eawag.

opendata.swiss (federal OGD portal)

A metadata catalogue only — DCAT records with API (JSON)/XML metadata access pointing to hydrodaten.admin.ch landing pages. The FOEN dataset pages fetched carried no explicit licence statement, whereas geocat.ch records for the same networks do state 'Opendata OPEN: Freie Nutzung'. Aggregator only; contact for FOEN hydrology datasets: hydrologie@bafu.admin.ch. Source: opendata.swiss

Drinking water monitoring — WVZ and SVGW

Wasserversorgung Zürich (WVZ): real-time online analyser network across treatment stages (turbidity, pH, conductivity) and distribution network, with Daphnia biotest units at Grundwasserwerk Hardhof. Lab results published as annual CSV covering >300 parameters at data.stadt-zuerich.ch. SVGW trinkwasser.ch: voluntary publication platform for water suppliers; explicitly provides no real-time data and no contamination alerts; SVGW takes no responsibility for correctness. Note: no national/cantonal network of *fountain* (Brunnen) sensors was confirmed.
