

Team Funky — AI Infrastructure Budget

FunkyForelle · CHF 10,000

Team Funky is responsible for building and deploying the universal dissolved oxygen prediction model. Based at Uni Bern / ETH Zürich. UBELIX HPC cluster used for training; lightweight cloud hosting for inference and data pipeline.

Item	Qty	Unit CHF	Total CHF
COMPUTE			
UBELIX HPC paid compute allocation (Uni Bern, 4 months)	1	1,500	1,500
ML intern hardware — laptop/SSD if needed	1	1,500	1,500
HOSTING & INFRASTRUCTURE			
Inference hosting — lightweight CPU server (4 months)	1	600	600
Data pipeline + time-series storage (S3/equivalent)	1	700	700
Dashboard hosting — web interface for Patrick's team (4 months)	1	400	400
CI/CD pipeline + automated testing	1	300	300
DATA ACCESS			
Cantonal data portal access fees (if applicable)	1	500	500
Dev tools + monitoring (Weights & Biases, etc.)	1	400	400
FIXED TOTAL			6,000
RESERVE			
Additional GPU training runs, unexpected data costs, model iterations	1	4,000	4,000
TOTAL			10,000

Notes

- UBELIX (Uni Bern HPC cluster) replaces commercial cloud GPU — significantly cheaper and data stays in Switzerland.
- Ideenlabor Uni Bern provides free workspace and equipment access for enrolled students.
- All model code, weights, and training scripts published under MIT licence.
- Reserve covers model retraining if pilot sensor data requires architecture changes.
